

ISO New England Recommended FCM Maintenance Allotments

As specified in Section III.13.7.1.1.3 of the ISO New England Transmission, Markets and Services Tariff (the “Tariff”), a resource is considered “available” when, among other things, it is on a planned maintenance outage that was approved in ISO New England’s (the “ISO”) annual maintenance scheduling process provided that:

- (i) Unless specifically requested by the ISO, the resource has not scheduled such maintenance in either December or January, or during the period June 1 through September 15; and
- (ii) The resource has not exceeded the maximum allowable days of annual maintenance at the time of the Shortage Event as described in the ISO New England Manuals and ISO New England Administrative Procedures.

During 2006 and 2007, the ISO worked with New England stakeholders to develop the maximum allowable hours of annual maintenance as required by this section of the Market Rule. At the January 16, 2008 Reliability Committee, a set of values was approved by New England Stakeholders and will be used to evaluate if a resource is “available” during any shortage events occurring in the Capacity Commitment Periods of 2010-2011 and 2011-2012. The values that were approved are shown below in Table 1.

In order for Participants to understand what category types their resource belongs to, the ISO has put together the mapping table shown in Table 2. This mapping is based on the resource data contained in the 2008 Capacity, Energy, Loads, and Transmission (CELT) Report.¹

¹ The CELT Report can be found on the ISO-NE website at: <http://www.iso-ne.com/trans/celt/report/index.html>

Table 1 – Forward Capacity Market – Unit Maintenance Allotment Values for the 2010-2011 and 2011-2012 Capacity Commitment Periods

Generator Type	Not to Exceed EPOH²	Over This Many Years	Not to Exceed in a Calendar Year
Coal Fired Steam Plant – Subcritical	7,200	9	1,400
Coal Fired Steam Plant – Supercritical and Cyclone Boilers	8,400	9	1,700
Oil and Dual-fired Steam Plant - Subcritical	6,500	9	1,400
Oil and Dual-fired Steam Plant - Supercritical	7,700	9	1,700
Natural Gas Fired Steam Plant	6,500	9	1,400
Waste Fuel Fired Steam Plant	6,500	9	1,400
Combined Cycle Combustion Turbine Plant	5,000	9	1,400
Natural Gas Simple Cycle Turbine Plant	1,200	3	1,000
Jet Fuel Fired Simple Cycle Turbine Plant	1,200	3	1,000
Oil Fired Simple Cycle Turbine Plant	1,700	3	1,100
Internal Combustion Engine Plant	1,600	3	1,100
Nuclear Power Plant	2,500	3	1,400
Hydro Power Plant	6,900	10	2,000
Pumped Storage Power Plant	6,900	10	2,000

² Equivalent Planned Outage Hours
