#### Basis for Intervening:

##### Description of ISO New England Inc.

ISO New England Inc. ("ISO") is a private, non-profit entity that serves as the regional transmission organization for New England. The ISO administers the New England energy markets and operates the New England bulk-power system pursuant to the ISO New England Inc. Transmission, Markets and Services Tariff and the Transmission Operating Agreement with the New England Transmission owners. The ISO provides transmission service pursuant to the region's open access transmission tariff. The ISO is also responsible for maintaining the reliability of the region's bulk-power system and for managing the region's system planning process.

#### ISO Grounds for Intervention:

The ISO has an interest in this proceeding as the entity that is responsible for ensuring the reliable operation of the New England transmission system and for administering the region's wholesale electric markets. Furthermore, inasmuch as the Tower Research companies are also market participants in New England, the ISO has a responsibility to address any membership or financial related issues that may arise in this proceeding that may be applicable in New England. These responsibilities create a direct and substantial interest in this proceeding and the ISO's interests may be directly affected by the outcome of this proceeding. The ISO will not be adequately represented by other parties to this proceeding and therefore has a right to intervene with full rights as a party.
