

Monthly Market Operations Report

October 2014

ISO New England Inc.
Market Analysis and Settlements
November 18, 2014

1. Introduction

1.1 About ISO New England

Created in 1997, ISO New England Inc. (the ISO) is the not-for-profit regional transmission organization (RTO) responsible for the day-to-day reliable operation of New England's bulk power generation and transmission system, oversight and administration of the region's wholesale electricity markets, and management of a comprehensive regional bulk power system planning process.

1.2 Market Reporting

The ISO's FERC Electric Tariff No. 3, Section III – Market Rule 1 – Standard Market Design, Appendix A – Market Monitoring, Reporting and Market Power Mitigation Section III.A.11.2.1 requires the ISO to publish a monthly report, “which will be available to the public...containing an overview of the market's performance in the most recent period.”

The ISO produces many reports that summarize the operations of New England's wholesale electricity markets. The weekly report provides summaries of key market activities for the trading week encompassing Monday-Sunday. This report, generally posted on Wednesdays, can be found on the ISO's web site [here](#)¹. This report is also supplemented by a Mid-Week Market Update, generally posted on Fridays, that reports pricing and congestion highlights from Monday through Thursday. This update may be accessed [here](#).

Monthly summaries of certain wholesale market concepts are reported monthly by the ISO's Chief Operating Officer at the NEPOOL Participants Committee Meeting. These summaries are posted on the ISO's web site [here](#), under the link entitled “Materials.”

Additionally, in compliance with federal requirements, the ISO issues quarterly reports of key statistics for the region's wholesale electric power markets. These reports can be found on the ISO's web site [here](#)².

1.3 About This Report

This report summarizes aspects of New England's wholesale electricity markets that are generally not discussed in the first two reports noted above. There are many interrelationships between the various markets that the ISO administers – each of the concepts presented in this report may interact with others, and second order effects cannot be included here. Additional information can be found on the ISO's web site [here](#).

3. Monthly Summary

Day-ahead and real-time LMPs at the New England Hub averaged \$32.19/MWh and \$30.64/MWh, respectively, during October 2014. Day-ahead and real-time prices at the Hub and in the Load Zones averaged 4-20% lower than September 2014 averages. In the aggregate, October 2014 day-ahead and real-time LMPs were approximately 11% lower during October 2014 than in October 2013. Average natural gas prices were 26% below the prior year's average prices, while residual fuel prices were down 19% from a year ago.

Overall, the average of the hourly real-time LMPs at the Hub and in the Load Zones ranged between 8.8% lower than day-ahead in the Maine (ME) Load Zone to 4.8% lower than its day-ahead counterpart in the Hub Load Zone. In the Day-Ahead Market, Load Zone average LMPs ranged between 3.1% lower than the Hub average LMPs in the ME Load Zone to 2.2% higher than the Hub in the Rhode Island (RI) Load Zone. In the Real-Time Market, Load Zone average LMPs ranged between 7.2% lower than the Hub average LMPs in the ME Load Zone to 0.4% higher than the Hub in the Connecticut (CT) Load Zone. Price differentials between on-peak and off-peak hours at the Hub and in the Load Zones ranged between 48% and 63% in both the Day-Ahead and Real-Time Markets.

The New England Control Area was a net importer of electricity in the Real-Time Market during October. In the Day-Ahead Energy Market, there were approximately 162,000 MWh of total exports and 1,646,000 MWh of imports, yielding a net import of approximately 1,484,000 MWh. In the Real-Time Energy Market, there were approximately 203,000 MWh of total exports and 1,777,000 MWh of imports, yielding a net import of approximately 1,574,000 MWh. This was about 363,000 MW higher than a year ago.

The Monthly FTR Auction (October 2014) had 32 participants and the awarded value of FTRs in the auction totaled \$795K. This represented an increase of \$100K over the previous month and an addition of about \$32K over the prior year's monthly FTR auction. The allocation of FTR Auction Revenue for October 2014 resulted in \$2.3 million awarded to eligible entities, with \$134K allocated to Incremental Auction Revenue Rights (IARR).

The Marginal Loss Revenue Fund totaled \$2.2 million for October, down \$800K from its September 2014 total.

Total Forward Reserve Credits to eligible assets of \$13.2 million were reduced by \$948K in Failure to Reserve Penalties and \$1K in Failure to Activate Penalties during October 2014. The net Forward Reserve Payment of \$12.3 million represented 89% of the maximum possible payment of \$13.8 million. Real-Time Reserve Prices occurred in 173 separate hours during the month, and those yielded real-time payments to designated assets of \$2.3 million. These payments were reduced by Forward Reserve Energy Obligation Charges totaling \$554K yielding a net compensation of \$1.7 million during the month.

Regulation Market Payments totaled \$1.1 million during the month, a decrease of \$834K from the September 2014 value of \$1.9 million.

For the month of October 2014, Forward Capacity payments were made to a total of 32,881 MW of capacity and totaled \$91.7 million.

The Transitional Demand Response program is the method through which demand assets can participate in the Energy Market. Payments during October 2014 totaled \$91,000 for interruptions associated with Day Ahead, \$17,000 for interruptions associated with the Real Time, and \$0 associated with FCM/Audit. Total Transitional Demand Response payments for the month, \$108,000, were down approximately \$50,000 from their September levels.

4. Locational Marginal Prices (LMPs)

Under Standard Market Design (SMD), the LMP is the cost of supplying an increment of load at a particular location. LMPs are calculated for each Internal and External Node as well as the eight Load Zones and the internal Hub in both the Day-Ahead and Real-Time Markets. LMPs are made up of three components: energy, congestion and marginal loss. The energy component of an LMP is the cost of providing an additional MW of energy to the distributed market reference bus. In any hour, the energy component is the same for all locations, while the congestion and marginal loss components vary among locations. If there were no congestion and losses, LMPs would be the same for all locations. Although the three components of the LMP are separated in some stages of the accounting process, the cost of energy at a location is the total LMP.

The following tables summarize Hub, zonal, and external node LMPs during the month on an overall, on-peak, and off-peak basis. On-peak hours are weekdays between 7:00 a.m. and 11:00 p.m. Off-peak hours are weekdays between 11:00 p.m. and 7:00 a.m., Saturdays, Sundays, and North American Electric Reliability Council (NERC) holidays.

4.1 LMP Summary Statistics

The following tables show summary statistics for LMPs for the Hub, eight internal Load Zones, and five external nodes for both the Day-Ahead and Real-Time Markets:

4.1.1 All Hours, October 2014

Monthly Avg Real-Time LMPs for Hub and External Nodes

13 Mos Ending October 2014, All Hours

Monthly Avg Real-Time LMPs for Hub and External Nodes

13 Mos Ending October 2014, On-Peak Hours

4.4 For More Information

The ISO provides a discussion of LMP results on a weekly basis in its Weekly Market Performance Report, located [here](#)³.

The ISO also provides a discussion of LMP results on an annual basis in its Annual Market Performance Reports, located [here](#)⁴.

Downloadable Hub and Load Zone weekly and monthly LMP indices are located [here](#).

Customizable downloads of Day-Ahead and Real-Time Hourly LMPs can be performed [here](#).

Current Day-Ahead and Real-Time LMPs for the Hub and Load Zones can be monitored [here](#).

A discussion of the calculation of LMPs can be found in the ISO's Market Rule 1 located [here](#).

³ Select "Weekly Markets Reports" from the document type filter on the left hand side of the page

⁴ Select "Annual Markets Reports" from the document type filter on the left hand side of the page

5. Imports and Exports

Market Participants can submit hourly Fixed External Transaction quantities for which they commit to import at Day-Ahead LMPs for delivery in the next Operating Day. They can also submit hourly Fixed External Transaction quantities for which they commit to import at Real-Time LMPs for physical delivery within the Operating Day. There are also several types of price-dependent transactions that can be submitted.

5.1 Net Interchange Summary, October 2014

The following tables show summary statistics for imports and exports on the six external interfaces for both the Day-Ahead and Real-Time Markets:

5.1.1 Day-Ahead and Real-Time Market Summary by Interface

5.4 For More Information

Selectable historical hourly net interchange for the New England Control can be found on the ISO's website [here](#).

Monthly, daily, and hourly summaries of New England Control Area net interchange can be found on the ISO's web site [here](#).

The market rules governing the scheduling of external transactions can be found in Section III.1.10 "Scheduling" of the ISO's Market Rule 1 located [here](#).

The business rules and procedures for external transactions can be found in Section 6.5, "External Transactions" in the ISO's Manual 11 – Market Operations located [here](#).

A history of emergency purchases and sales from and to neighboring control areas can be found [here](#).

6. Financial Transmission Rights (FTR) Auctions

FTRs are financial instruments that entitle the holder to a share of congestion collections in the Day-Ahead Market. The difference in prices (excluding losses) along a path or between any two locations on the system in the Day-Ahead Market reflects the marginal cost of transmission along that path. An FTR allows its purchaser to collect up to the full value of such congestion as consistent with the FTR's specified path and MW value.

FTRs can be acquired in three ways:

- FTR Auction – the ISO conducts periodic auctions to allow bidders to acquire and sell monthly and long-term FTRs. The bidders in the FTR auction initially define all FTRs.
- Secondary Market – The FTR secondary market is an ISO-administered bulletin board where existing FTRs are electronically bought or sold on a bilateral basis.
- Unregistered Trades – FTRs can be exchanged bilaterally outside of the ISO-administered process. However, the ISO compensates only FTR holders of record and does not recognize business done in this manner for day-ahead congestion settlement purposes.

6.1 FTR Auction Results

The results of the monthly FTR auction and any applicable long-term FTR auction are shown below.

6.1.1 Monthly Auction Summary, October 2014

Bids to Buy or Offers to Sell	On-Peak or Off-Peak	No. of Bids or Offers	Bid or Offered MW-Mos.	Bid or Offered Dollars	No. of Awards	Awarded MW-Mos.	Awarded Dollars
Buy	Off	11,978	55,518	\$1,599,155	4,953	20,753	\$308,082
Buy	On	12,171	61,712	\$1,865,883	4,848	20,101	\$503,738
Buy	Buy Total	24,149	117,230	\$3,465,038	9,801	40,854	\$811,820

6.4 For More Information

The market rules governing the FTR auctions can be found in Section III.7 “Financial Transmission Rights Auctions” of the ISO’s Market Rule 1 located [here](#).

The business rules and procedures for FTRs can be found in Section 6.5, “External Transactions” in the ISO’s Manual 6 – Financial Transmission Rights located [here](#).

Information about the monthly and long-term FTR auctions can be found on the ISO’s web site [here](#).

7. Effectiveness of FTRs

7.1 FTRs as a Congestion Hedging Instrument

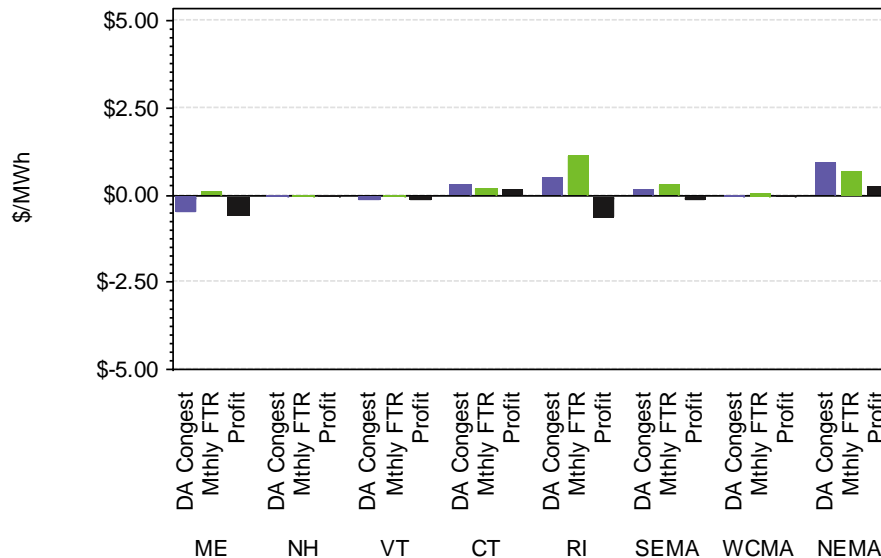

Congestion costs occur in the Day-Ahead and Real-Time Markets between locations on the system when the most economic power cannot be transferred to needed load areas without violating transmission limits. These costs are embedded in the congestion component of LMP and its difference between locations. Customers who wish to protect against these real-time costs can do so by scheduling in the Day-Ahead Market. In turn, to hedge against day-ahead congestion costs, customers can obtain FTRs.

To analyze congestion and the effectiveness of the FTR market in managing the costs of congestion in New England, day-ahead congestion costs are examined in relation to FTR auction path clearing prices. Transmission paths from the Hub to the various New England Load Zones are examined in this section. In the following exhibits, monthly on-peak auction clearing prices are compared to the average day-ahead congestion components of prices for the month for each Hub-to-zone path. All units are presented in \$/MWh equivalents.

Note that the exhibits are for illustration only, and do not indicate whether FTRs were actually owned by any market participant for the paths shown.

Monthly Avg Congestion vs. FTR Cost, OCT2014

Hub to Load Zones, On-Peak Hours

Monthly Avg Congestion vs. FTR Cost, OCT2014

Hub to Load Zones, Off-Peak Hours

7.2 Profitability of Monthly FTRs, 13 Mos. Ending October 2014, On-Peak Hours, in \$/MWh, from Hub to Load Zones

A comparison of the “profitability” or the success of the hedge that the illustrated FTRs provided over the last thirteen months is presented below.

8. Auction Revenue Rights

Auction Revenue is allocated to two main categories. First, it is allocated in the form of Incremental Auction Revenue Rights (IARRs) to entities, which, by paying for transmission upgrades, have increased the transfer capability of the NEPOOL transmission system and have enabled more FTRs to be available in the FTR auction. Second, it is allocated through the Auction Revenue Rights (ARR) process, where it is primarily received by congestion paying load-serving entities (LSEs). The majority of auction revenue is allocated through the ARR process.

The ARR process allocates dollars to:

- *Excepted Transactions* – special grandfathered transactions (listed in Attachment G of NEPOOL Tariff)
- *NEMA Contracts* – other long-term contracts having delivery in Northeastern Massachusetts.
- *Long-Term Firm Through or Out Service*.
- *Load Share* – the proportional Real-Time Load Obligation share of Congestion paying entities at the time of the pool’s coincident peak for the month.

The following table provides a more detailed view of how auction revenues are allocated through the ARR and IARR process by including the dollars allocated to each component of the ARR process for each of the last 13 months.

Month	Net FTR Auction Revenue	Excepted Transactions	NEMA Contracts	Load Share	Total ARR Allocation	IARR Allocation	Total Auction Distribution
Oct-13	-\$1,688,474	\$0	\$34,113	\$1,527,590	\$1,561,703	\$126,771	\$1,688,474

8.1 For More Information

The market rules governing the FTR auctions can be found in Section III.7 “Financial Transmission Rights Auctions” of the ISO’s Market Rule 1 located [here](#).

The business rules and procedures for FTR Auction Revenue Settlement can be found in Section 7 and the Incremental Auction Revenue Rights procedures can be found in Section 8 of the ISO’s Manual 6 – Financial Transmission Rights located [here](#).

The methodology for and details of ARR Contracts can be found [here](#).

9. Reserve Markets

The fifteenth Forward Reserve Market Auction, covering the Winter 2014-2015 Procurement Period (October-May) cleared on August 28, 2014. The results may be found on the ISO's website [here](#).

Participants must meet their cleared portfolio-based obligations by assigning them to eligible generating or dispatchable asset related demand through offering or bidding them into the Energy Market at a \$/MWh rate that is greater than or equal to the Forward Reserve Threshold Price. For the month of October 2014, the threshold price ranged from \$32.06 to \$76.65 and averaged \$52.29.

9.1 Forward Reserve Market Results

Each month, the ISO calculates an individual hourly Forward Reserve Payment Rate for each reserve product and reserve zone by reducing (on a \$/MWh basis) their auction clearing price by the Forward Capacity Auction clearing price for the capacity zone associated to the reserve zone in effect for that month, adjusted pursuant to Section III.13.2.7.3(b)⁵. Payments will be further reduced by any Failure-to-Reserve or Failure-to-Activate Penalties. FRM payments by reserve zone made during the month are shown in the following table. These figures are preliminary and subject to revision during the Settlement process.

9.1.1 FRM Payment Summary by Reserve Zone, October 2014

Reserve Zone	Reserve Product	Max FRM Payment	Final FRM Credits	Failure to Reserve Penalties	Failure to Activate Penalties	Total FRM Performance	Pct. of Max.
SYSTEM	TMNSR	\$9,297,975	\$9,051,795	-\$384,755	-\$1,113	\$8,665,927	93%
SYSTEM	TMOR	\$4,536,628	\$4,172,897	-\$563,310	\$0	\$3,609,587	80%
SYSTEM	TOTAL	\$13,834,603	\$13,224,692	-\$948,065	-\$1,113	\$12,275,514	89%

NEMABSTN	TOTAL	\$0	\$0	\$0	\$0	\$0	n/a

⁵ Prior to the start of the Forward Capacity Market on June 1, 2010, the auction clearing price was reduced by the ICAP Transition Rate for Unforced Capacity in effect for that month.

The ISO allocates Forward Reserve Credits, net of Forward Reserve Failure-to-Reserve Penalties and Forward Reserve Failure-to-Activate Penalties, to each Load Zone. The Forward Reserve charge allocation method changed on June 1, 2011. Under the new Forward Reserve Cost Allocation, the Forward Reserves Credits for TMNSR and TMOR are not allocated separately. Instead, the Forward Reserve Credits are allocated based upon System Requirements (Step 1) and Remaining Forward Reserve Credit (Step 2), if applicable. The System Requirements include the cost of procuring TMNSR and TMOR to meet the minimum requirements for the New England Control Area (Market Rule 1, Section III.9.2.1). The remaining Forward Reserve Credit includes the Incremental Cost associated with procuring Forward Reserves above the System Requirements. See Market Rule 1, Section III.9.9 Forward Reserve Charges and Manual 28, Section 2.6.2 Forward Reserve Charges for details on the two-step cost allocation approach.

FRM charges allocated to each Load Zone during the prior week are shown in the following table. These figures are also preliminary and subject to revision during the Settlement process.

9.1.2 FRM Charge Summary by Load Zone, October 2014

Load Zone	FRM Charge
ME	\$1,196,849
NH	\$1,154,248
VT	\$569,994
CT	\$2,966,647
RI	\$783,529
SEMA	\$1,429,169
WCMA	\$1,686,705
NEMA	\$2,488,374
ALL	\$12,275,514

9.2 Real-Time On-Peak LMP vs. Forward Reserve Threshold Price, Last 13 Mos.

**On-Peak LMP Average vs. Forward Reserve Strike/Threshold Price
13 Mos. Ending October 2014**

Number of times hourly RT LMP exceeded strike/threshold price during on-peak hours noted

9.3 Composition of Forward Reserve Market Payments, Last 13 Mos.

**Monthly Forward Reserve Market Payments
By Component, 13 Mos. Ending, October 2014**

9.4 Real-Time Reserve Markets

Resources that are providing Real-Time Reserves are designated in the ISO's Energy Management System. When reserves are ample, the Real-Time Reserve price is \$0. However, if there is a shortage of available reserves in a reserve zone or system-wide or reserve requirements are met through a re-dispatch of the system, non-zero Real-Time Reserve prices can result.

During the month, there were non-zero real-time reserve prices in 173 separate hours. On a reserve zone basis, non-zero prices occurred thus: CT-173 hours; NEMABSTN-173 hours; ROS-173 hours; SWCT-173 hours. The total compensation paid to assets providing real-time reserves during October 2014, and reductions in those payments for the Forward Reserve Obligation Charge are shown in the following table:

Reserve Zone	Real-Time Reserve Credits	Fwd Reserve Obligation Charges	Net Real-Time Reserve Payments
SYSTEM	\$2,296,752	(\$554,354)	\$1,742,398
ROS	\$1,343,313	(\$344,560)	\$998,754
SWCT	\$451,349	(\$57,371)	\$393,977
CT	\$289,254	(\$152,423)	\$136,831
NEMABSTN	\$212,836	\$0	\$212,836

The ISO allocates Real Time Reserve Credits, net of Forward Reserve Energy Obligation Charges, to each Load Zone. The Real Time Reserve charges allocated to each Load Zone during the month are shown in the following table. These figures are also preliminary and subject to revision during the Settlement process.

Load Zone	Reserve Product	RT Reserve Charge
ME	TMSR	\$96,766
ME	TMNSR	\$42,054
ME	TMOR	\$27,782
ME	ALL	\$166,601

10.4 For More Information

The market rules governing the Regulation Market can be found in Section III.1.11.5 “Regulation” of the ISO’s Market Rule 1 located [here](#).

The business rules and procedures for the Regulation Market can be found in the ISO’s Manual 11 – Market Operations located [here](#):

Information about current regulation clearing prices can be found on the ISO’s web site [here](#).

Selectable hourly historical regulation clearing prices can be found on the ISO’s web site [here](#).

11. Marginal Loss Revenue Fund

The Marginal Loss Revenue Fund is allocated back to customers hourly in a pro-rata format based on customer share of the Pool's RT Adjusted Load Obligation. It consists of six components, as displayed in the following formula:

$$\text{Monthly Marginal Loss Revenue} = (-1) * [\text{Loss Revenue (DA+RT)} + \text{Energy Settlement (DA+RT)} + \text{RT Inadvertent Energy Cost} + \text{RT Emergency Energy Sales}]$$

The following table shows the contribution of each component to the Marginal Loss Revenue Fund and the fund total for last thirteen months.

11.1 Marginal Loss Revenue Fund by Month, 13 Mos. Ending October 2014

Month	Day-Ahead Energy Stlmnt	Real-Time Energy Stlmnt	Day-Ahead Loss Rev	Real-Time Loss Rev	Real-Time Inadvrt Energy	Real-Time Emergency Energy	Day-Ahead Marginal Loss Total	Real-Time Marginal Loss Total	Marg Loss Rev Fund Total
Oct-13	\$5,299,001	\$815,360	-\$10,180,581	\$79,796	-\$552,255	\$0	\$4,881,580	-\$342,901	\$4,538,679

11.2 For More Information

Rules governing the calculation of the Marginal Loss Revenue Fund can be found in Section III.3.2.1 Accounting and Billing of the ISO's Market Rule 1 located [here](#).

12. Forward Capacity Market

The Forward Capacity Market (FCM) is an auction based approach to meeting New England’s forecasted capacity requirements for a future year. A portfolio of supply and demand resources is selected to provide this capacity through a competitive Forward Capacity Auction (FCA) process. Resources clearing in the FCA are paid the market clearing price for capacity and acquire a capacity supply obligation (CSO), a financially binding obligation to provide the cleared amount of capacity. FCM was implemented in June 2010, corresponding with the termination of the Forward Capacity Transition Period. For more information on the Forward Capacity Transition Period, see Section 12 of the Monthly Market Reports published prior to June 2011.

12.1 FCM Auction Results and Monthly Modifications

The outcome of the Forward Capacity Auction (FCA) determines the initial CSOs for Resources. In the event that the Capacity Clearing Price Floor condition is reached in the FCA, the ISO will adjust (prorate) the per-MW rate of each CSO to adjust the over-purchased capacity. After the FCA is finalized, Lead Participants of obligated Resources may have the option to leave the CSO of these resources based upon the default proration (full CSO with a reduced payment rate - referred to as ‘price proration’) or opt to prorate the CSO MWs and receive the full CCP (described as ‘MW proration’). The proration elections chosen by resources will not have an effect on the total amount of charges to load. The following table shows the aggregated CSO values by resource type from FCA 5, the 2014-2015 commitment period, with prorated amounts and change from the FCA for each resource type.

2014-2015 Forward Capacity Auction

Resource Type	FCA CSO MW	Prorated CSO MW	Proration Change MW
Demand	3,350	3,399	-191
Generator	31,439	29,165	-2,274
Import	2,011	1,831	-180
Total	37,040	34,395	-2,645

In the event where proration is rejected for reliability reasons, the resource will be still be paid consistent with the proration method. The difference between the resources actual payment based on the Capacity Clearing Price and what its payment would have been had prorationing not been rejected, will result in an FCM Proration Denial for Reliability Charge (PDFR) to cover this cost. This charge shall be allocated to Regional Network Load within the affected Reliability Region.

FCM Proration Denial for Reliability Charge

Month	ME	NH	VT	CT	RI	SEMA	WCMA	NEMA
Jun-14	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$987,345
Jul-14	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$987,345
Aug-14	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$987,345
Sep-14	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$987,345
Oct-14	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$988,468

Each month, CSO values can change for a variety of reasons, which are referred to below as CSO modifications. Typically, changes result from the monthly or annual Reconfiguration Auctions. Additional examples of CSO modifications include ISO participation in annual reconfiguration auctions and termination of resource supply obligations. The table below displays the CSO modifications for the current month.

CSO Modifications for October 2014

Capacity Zone	Resource Type	Balance Net CSO MW for Multiyear Offer MW	Existing Capacity Obligation MW	Multi-Year Existing Capacity Obligation MW	New Capacity Obligation MW	Retained for Reliability Capacity Obligation MW	Self-Supply Capacity Obligation MW	Total MW
Rest-of-Pool	Demand Resource	0.00	-362.22	-124.56	0.00	0.00	0.00	-486.78
Rest-of-Pool	Generator	0.00	-216.49	-11.00	-10.66	-604.25	-10.22	-852.61
Rest-of-Pool	Import	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Total		0.00	-578.71	-135.56	-10.66	-604.25	-10.22	-1,339.39

The table below displays a summary of the prorated CSO MW and dollars from the FCA, along with the CSO modifications for the current month. The CSO modification MWs are totaled for each Resource and Capacity Zone from the table above. These CSO modifications are used in the calculation of the final CSO MW and Dollars.

Final CSO MW and Dollars for October 2014

Capacity Zone	Resource Type	CSO MW	CSO Dollars	CSO Modification MW	CSO Modification Dollars	Final CSO MW	Final CSO Dollars
Rest-of-Pool	Demand Resource	2,774	\$9,645,058	-486.78	-\$1,434,271	2,287.70	\$8,210,787
Rest-of-Pool	Generator	30,834	\$84,831,210	-852.61	-\$2,441,828	29,981.50	\$82,389,382
Rest-of-Pool	Import	612	\$2,399,171	0.00	\$0	611.62	\$2,399,171
Total		34,220	\$96,875,440	-1,339.39	-\$3,876,099	32,880.82	\$92,999,341

12.2 FCM Payments and Charges

Supply Credit is the total credit paid to customer resources for incurring a CSO and is the sum of the following types of CSO-related payments: Forward Capacity Auction (FCA) Credits, Bilateral Dollars, and Reconfiguration Auction (RA) Dollars. The following table shows total Supply Credit and its aforementioned components by Capacity Zone for the last thirteen months.

Month	Capacity Zone	FCA Credit	Bilateral Dollars	Reconfiguration Auction Dollars	Supply Credit
Oct-13	Rest-of-Pool	\$76,884,183	\$36,259	\$97,450	\$77,017,892
Oct-13	Maine	\$9,676,613	-\$36,259	-\$97,450	\$9,542,904

Mar-14	Maine	\$9,678,117	-\$41,700	-\$124,424	\$9,511,993

Month	Capacity Zone	FCA Credit	Bilateral Dollars	Reconfiguration Auction Dollars	Supply Credit
Apr-14	Rest-of-Pool	\$76,861,369	\$35,140	\$15,390	\$76,911,899
Apr-14	Maine	\$9,676,920	-\$35,140	-\$15,390	\$9,626,389
May-14	Rest-of-Pool	\$76,861,369	\$35,140	\$195,214	\$77,091,723
May-14	Maine	\$9,676,920	-\$35,140	-\$195,214	\$9,446,565
Jun-14	Rest-of-Pool	\$93,392,258	\$0	-\$773,582	\$92,618,676
Jul-14	Rest-of-Pool	\$93,392,258	\$0	-\$773,582	\$92,618,676
Aug-14	Rest-of-Pool	\$93,392,258	\$0	-\$773,582	\$92,618,676
Sep-14	Rest-of-Pool	\$93,392,258	\$0	-\$773,582	\$92,618,676
Oct-14	Rest-of-Pool	\$93,767,041	\$0	-\$767,700	\$92,999,341

The initial supply credit paid for the CSO, as shown above, can be further adjusted based upon computed values for Peak Energy Rent (PER), the participation of the ISO in reconfiguration auctions, and actual resource performance. PER is a downward adjustment of FCM payments to reflect energy market revenues earned during high priced hours. In reconfiguration auctions, credits are reduced by the sale of excess CSO by the ISO or increased by the purchase of additional CSO. Resource availability during shortage events (generator and import resources) or performance during dispatch events and performance hours (demand resources) result in additional penalties and credits. The supply credit adjusted for reasons just stated results in the pool of money called the Net Regional Clearing Price (NRCP) Credit, which is the basis for charges for capacity allocated to real-time load obligation. Additional credits may be earned by resources retained for reliability and their cost is allocated to Regional Network Load through the Open-Access Transmission Tariff rather than to Capacity Load Obligation (CLO).

The following table shows the various credit adjustments and total payments in the FCM made over the last 13 obligation months.

Month	Capacity Zone	CSO MW	Supply Credit (A)	PER Adjustment (B)	Excess DR Penalties (C)	NRCP Credit (D=A+B+C)	Reliability Credit (E)	Total Payment (F=D+E)

For each month and Capacity Zone, Load Serving Entities (LSEs) have capacity requirements which are calculated as their share of the total CSO purchased, based on their contribution to the system peak load from the previous year. Customers pay for capacity based on CLO. A customer's CLO is equivalent to its capacity requirement, adjusted for any Hydro-Quebec Installed Capacity Credits (HQICC), self-supply MWs, and CLO bilateral contracts. CLO bilateral contracts provide a means of transferring a capacity load obligation between two customers. Note that any customer, not just LSEs, can take on or shed CLO through a CLO bilateral contract.

The Net Regional Clearing Price is the rate at which load pays for capacity. It is calculated as:

$$NRCP (\$/kW\text{-month}) = NRCP \text{ Credit} / (CLO \text{ MW} * 1000)$$

$$\text{Where: } CLO \text{ MW} = CSO \text{ MW} - \text{Self Supply MW} - \text{Excess RTEG MW}$$

Excess RTEG MW is composed of the CSO MW of Real Time Emergency Generation purchased in the Forward Capacity Auction in excess of 600 MW.

Charges are calculated as the product of a customer's CLO and the NRCP.

The following table provides details on aggregate FCM charges to load.

Month	CSO MW (A)	CLO Bilat MW	HQICC MW (B)	Excess RTEG MW (C)	Self Supply MW (D)	Capacity Req MW (E=A+B-C)	Peak Contrib MW	CLO MW (F=A-C-D)	Net Regional Clearing Price (\$/kW-month)	Capacity Load Obligation Charge
Oct-13	32,811	636	998	0	2,693	33,809	25,543	30,118	\$2.807706	\$84,416,622

The calculations below describe how the Capacity Requirement and the Capacity Load Obligations are calculated for each Capacity Zone.

$$\text{Capacity Requirement}_{\text{Capacity Zone}} = (\text{Peak Contribution MW (CCP-2)}_{\text{Capacity Zone}} / \text{Peak Contribution (CCP-2)}_{\text{Pool}}) * (\text{CSO}_{\text{Pool}} + \text{HQICC MW}_{\text{pool}} - \text{Excess RTEG MW}_{\text{pool}}) * (-1)$$

$$\text{CLO}_{\text{Capacity Zone}} = \text{Capacity Requirement}_{\text{Capacity Zone}} - \text{HQICC MW}_{\text{Capacity Zone}} - \text{CLO Self-Supply MW}_{\text{Capacity Zone}}$$

There are two sides to a self-supply agreement – the generator supplying the MW and the entity using the MW to reduce its capacity requirement. During the 2013/2014 commitment period, with multiple capacity zones, a generator in Maine can have self-supply designations in both the Rest-of-Pool (ROP) and Maine. The NRCP is the per MW cost of capacity in a capacity zone. Self-supply MW used in the NRCP calculation are based on where the generator supplying the MWs resides and is presented in that manner below.

The following table provides details on FCM charges to load at the Capacity Zone level.

Month	Capacity Zone	CSO MW	HQICC MW	Self Supply MW	Capacity Req MW	Peak Contrib MW	CLO MW	Net Regional Clearing Price (\$/kW-month)	Capacity Load Obligation Charge

12.3 Capacity Transfer Rights (CTRs)

CTRs are a mechanism to distribute excess revenue that results from differences in payment rates between Capacity Zones; a CTR fund will be calculated for each constrained capacity zone. There are two types of CTRs: Specifically Allocated CTRs (defined in Market Rule 1 and always paid), and Residual CTRs (remaining funds or shortfall of funds after Specifically Allocated CTRs are paid). Residual CTRs will be allocated to the load serving entities with CLO on the import-constrained side of the interface. For the 2013/2014 Capacity Commitment Period (CCP), Maine is the export-constrained Capacity Zone, while Rest of Pool is on the import-constrained side of the interface. The Capacity Load Obligation Charge above can change depending on the CTRs associated with the Capacity Zone. The Capacity Transfer Rights Fund consists of the following:

- Pool Planned Unit CTRs for certain municipal utilities
- Maine Export Interface CTRs for Casco Bay
- Provisions for Transmission Upgrade CTRs

The following table provides detail, by month and capacity zone, of the Capacity Transfer Rights Dollars, the Specifically Allocated CTR MW and Dollars, along with the Residual CTR MW and Dollars.

Month	Export-constrained Capacity Zone (Charged)	Import-constrained Capacity Zone (Paid)	CTR Fund Dollars	Specifically Allocated CTR MW	Specifically Allocated CTR Dollars	Residual CTR MW	Residual CTR Dollars
Oct-13	Maine	Rest-of-Pool	-\$147,156.40	329.97	\$59,394.60	-27,747.03	-\$206,551.00
Nov-13	Maine	Rest-of-Pool	-\$179,395.79	329.97	\$59,394.60	-27,741.77	-\$238,790.39
Dec-13	Maine	Rest-of-Pool	-\$141,057.39	329.97	\$59,394.60	-27,761.42	-\$200,451.99
Jan-14	Maine	Rest-of-Pool	-\$201,180.24	329.97	\$59,394.60	-27,761.42	-\$260,574.84
Feb-14	Maine	Rest-of-Pool	-\$126,725.81	329.97	\$59,394.60	-27,761.42	-\$186,120.41

12.4 PER Adjustment

As stated above, PER is a payment adjustment made to reflect revenues earned by resources during high priced hours in the Energy markets. Generation and Import resources with a CSO are subject to PER adjustments (excluding self-supply CSO MWs). Demand resources are not subject to PER adjustments.

The following table provides detail, by month and capacity zone, of the CSO subject to PER, the rate at which these CSO are charged, and the total PER adjustment. It is important to note that individual resources are subject to an overall PER cap. Therefore, the product of the CSO and the rate in the table below will not necessarily equal the total PER adjustment.

Month	Capacity Zone	PER CSO MW	Average PER (\$/kW-month)	Total PER Adjustment
Oct-13	Maine	2,974	0.011	\$32,712
Oct-13	Rest-of-Pool	25,510	0.077	\$1,964,305
Nov-13	Maine	2,925	0.011	\$32,176
Nov-13	Rest-of-Pool	25,610	0.077	\$1,971,944
Dec-13	Maine	2,999	0.020	\$59,975
Dec-13	Rest-of-Pool	25,606	0.086	\$2,202,113
Jan-14	Maine	2,766	0.052	\$143,810
Jan-14	Rest-of-Pool	25,815	0.120	\$3,097,750
Feb-14	Maine	2,672	0.041	\$109,568

12.7 Performance

All capacity resources with a CSO are subject to evaluation during each obligation month of a commitment period to ensure they can deliver the capacity for which they are paid. Generation and Import resources are evaluated for performance during shortage events. Demand resources are evaluated during dispatch events and performance hours.

12.7.1 Generation and Import Resource Availability

A shortage event reflects a shortage of operating reserves, as defined by 30 or more consecutive minutes of system Reserve Constraint Penalty Factor activation. Available MWs from Generation and Import resources are measured during shortage events, and availability scores are calculated based on this performance. Available MWs can be adjusted by Supplemental Availability Bilateral (SAB) agreements as well as exempt outage MWs. A resource's availability score is then used to compute the availability penalty associated with the shortage event.

Month	Hours with Shortage Events	Total Duration of Shortage Events (Hours)	Resource Type	SAB MW (Sold)	SAB MW (purchased)	Shortage Event Penalty
Oct-13	0	0.00	Generator	0	0	\$0
Oct-13	0	0.00	Import	0	0	\$0
Nov-13	0	0.00	Generator	0	0	\$0
Nov-13	0	0.00	Import	0	0	\$0

Month	Hours with Shortage Events	Total Duration of Shortage Events (Hours)	Resource Type	SAB MW (Sold)	SAB MW (purchased)	Shortage Event Penalty
Dec-13	3	85.00	Generator	875	875	-\$5,628,451
Dec-13	3	85.00	Import	0	0	-\$45,439

Oct-14	0	0.00	Import	0	0	\$0

12.7.2 Demand Resource Performance

Demand Resources are collections of assets which reduce their consumption of energy in order to provide capacity to the system. There are four types of Demand Resources: Real-Time Demand Response resources (RTDR), Real-Time Emergency Generation resources (RTEG), On-Peak resources, and Seasonal Peak resources. RTDR and RTEG are active demand resources, and are required to respond to dispatch instructions from ISO-NE. During these dispatch events, active resources are expected to curtail their energy consumption for the system by an amount equal to that requested by ISO-NE. On-Peak and Seasonal Peak resources, on the other hand, are passive demand resources, and do not receive dispatch instructions from ISO-NE. Instead, these resources curtail their electricity use at set times throughout the year. On-Peak resources must reduce consumption during summer peak hours (non-holiday weekdays, 1:00 p.m. to 5:00 p.m., during June, July, and August) and winter peak hours (non-holiday weekdays, 5:00 p.m. to 7:00 p.m., during December and January). Seasonal Peak resources must reduce consumption during the summer months of June, July, and August and during the winter months of December and January in hours on non-holiday weekdays when the Real-Time System Hourly Load is equal to or greater than 90% of the most recent “50/50” System Peak Load Forecast.

Demand Resource performance is measured during hours with dispatch events for active resources, and during performance hours for passive resources. Resources with a capacity value less than their CSO will be assessed a penalty, while those with a capacity value greater than their CSO are eligible for a performance incentive. In the absence of a performance event during performance months, a resource’s

capacity value and resulting variance will be based on its effective audit result; and in non-performance months, a resource's capacity value and resulting variance will be based upon its Seasonal Demand Reduction Value.

The following table displays a pool-level summary of Demand Resource performance by type for the past 13 months.

Month	DR Type	Performance Hours	CSO MW	Capacity Value (MW)	Negative Capacity Variance (MW)	Positive Capacity Variance (MW)	Performance Penalty (\$)	Performance Incentive (\$)

Detailed information on the FCM, including information on the qualification process, auction results, and FERC filings and orders can be found [here](#).

Detailed information about FCM Charge calculation summaries can be found [here](#).

Detailed information about charges to Network Load can be found [here](#).

13. Energy Market Payments to Demand Assets

Energy Market payments to demand assets are administered through the Transitional Demand Response (TDR) program.

13.1 Transitional Demand Response

The Transitional Demand Response (TDR) program represents, in the aggregate, agreements between wholesale providers and retail customers to encourage reduction of their electricity consumption during periods of peak demand. Transitional Demand Response in New England is administered post the Day-Ahead Energy Market clearing and the scheduling of demand reductions by Market Participants in real-time based upon system conditions.

13.1.1 Transitional Demand Response Payments

- A Real-Time Demand Response Asset with an offer that clears in the post Day-Ahead Energy Market clearing will receive a payment for its Day-Ahead Demand Reduction Obligation at the applicable Day-Ahead Zonal Locational Marginal Price (LMP) and will be paid or charged for the difference between its Real-Time Demand Reduction Obligation and its Day-Ahead Demand Reduction Obligation in Real-Time at the applicable Real-Time Zonal LMP.
- A Real-Time Demand Response Asset with an offer that does not clear in the post Day-Ahead Energy Market clearing will be eligible to receive a payment for its Real-Time Demand Reduction Obligation at the applicable Real-Time Zonal LMP when the hourly provisional Real-Time Zonal LMP is greater than or equal to the its Demand Reduction Offer price.
- A Real-Time Demand Response Asset or Real-Time Emergency Generation Asset that is associated to a Demand Resource in the Forward Capacity Market will receive a payment at the applicable Real-Time Zonal LMP, for its demand reduction, when the Demand Resource is dispatched or audited pursuant to Section III.13 of Market Rule 1.

13.1.2 Transitional Demand Response Charges

- The total credits associated with Transitional Demand Response are allocated proportionally on an hourly basis to Market Participants with Real-Time Load Obligations on a system-wide basis. Excluded are Real-Time Load Obligations incurred at all External Nodes or incurred by Dispatchable Asset Related Demand Postured by the ISO.

The following table includes Day-Ahead Demand Reduction Obligation megawatt-hours MWh (Day-Ahead Cleared MWh, plus average avoided peak distribution losses of 6.5%), Real-Time Demand Reduction MWh, Real-Time Demand Reduction Obligation MWh, RT Demand Reduction Deviation Set to Zero MWh, Real-Time Demand Reduction Deviation MWh, Average Pool Demand Response Charge Allocation MWh, and the FCM/Audit Demand Reduction MWh (Also adjusted for average avoided peak distribution losses of 6.5%).

$$\text{RT Demand Reduction Obligation MWh} = \text{Average Avoided Peak Distribution Losses (1.065)} * \text{RT Demand Reduction MWh}$$

$$\text{RT Demand Reduction Deviation MW} = \text{RT Demand Reduction Obligation MWh} - \text{DA Demand Reduction Obligation MWh} + \text{RT Demand Reduction Deviation Set to Zero MWh}$$

Month	Transitional Demand Response Settlement MW					Other Statistics	
	DA Demand Reduction Obligation MWh (A)	RT Demand Reduction MWh (B)	RT Demand Reduction Obligation MW (C)=(B)*1.065	RT Demand Reduction Deviation Set to Zero MWh (D)	RT Demand Reduction Deviation MWh (E)=(C)-(A)+(D)	Average Pool Demand Response Charge Allocation MWh	FCM/ Audit Demand Reduction MWh
Oct-13	2,756	2,465	2,625	0	-131	14,781	0
Nov-13	2,817	3,700	3,941	0	1,124	15,519	0
Dec-13	3,002	3,740	3,983	0	981	16,917	538
Jan-14	4,354	5,746	6,119	-49	1,717	17,305	188
Feb-14	3,550	3,869	4,120	-3	568	16,580	9
Mar-14	2,244	2,496	2,659	-25	389	16,534	0
Apr-14	404	562	599	-66	129	14,615	0
May-14	2,085	2,439	2,597	0	513	14,401	3
Jun-14	2,423	2,714	2,891	-56	412	16,705	105
Jul-14	2,661	2,661	2,834	-55	118	19,259	306
Aug-14	2,187	2,891	3,079	-114	778	17,722	48
Sep-14	2,451	2,952	3,143	-65	627	15,936	0
Oct-14	2,208	2,430	2,588	-49	330	14,622	0

In the above table the RT Demand Reduction Deviation Set to Zero MWh column is the difference between DA Demand Reduction Obligation MW and RT Demand Reduction Obligation MW when the RT Demand Reduction Deviation MWh has been set to zero in the settlement, which occurs when the following is true:

- Control Room denies interruption of an Asset
- DA Demand Reduction Obligation MW > 0, Load Zone Real-Time Net Benefit Hour Flag = N, and RT Demand Reduction MWh > DA Demand Reduction Obligation MW

The following table displays Day-Ahead payments, Real-Time Payment Dollars, Total Payment (sum of total Day-Ahead and Real-Time Payments), and the Charge per MWh.

Month	DA Payment Dollars	RT Payment Dollars	FCM Audit Demand Reduction Dollars	Total Payment (Charge) Dollars	Charge per MWh
Oct-13	\$110,377	-\$6,630	\$0	\$103,747	\$0.00
Nov-13	\$144,804	\$65,548	\$0	\$210,352	\$0.00
Dec-13	\$443,245	\$176,236	\$179,801	\$799,282	\$0.00
Jan-14	\$1,044,899	\$372,170	\$35,941	\$1,453,011	\$0.00
Feb-14	\$657,926	\$122,311	\$2,622	\$782,860	\$0.00
Mar-14	\$378,457	\$75,420	\$0	\$453,877	\$0.00
Apr-14	\$24,075	\$9,361	\$0	\$33,436	\$0.00
May-14	\$96,423	\$24,095	\$191	\$120,708	\$0.00
Jun-14	\$119,970	\$32,466	\$5,061	\$157,497	\$0.00
Jul-14	\$150,444	\$17,187	\$9,018	\$176,649	\$0.00
Aug-14	\$94,746	\$47,205	\$1,255	\$143,206	\$0.00
Sep-14	\$115,589	\$41,583	\$0	\$157,172	\$0.00
Oct-14	\$90,613	\$16,941	\$0	\$107,554	\$0.00

13.2 For More Information:

Rules governing the calculation of the Transitional Demand Response can be found in Section III.13 Market Rule 1 and Section III, Appendix E located [here](#).
