Re: Request for Pool Supported PTF Cost Treatment for TMLP-24-TCA-01 – Cleary Flood Substation Ring Bus Replacement Project – ISO New England Written Finding and Determination

Dear Mr. Parrotta:

This letter is being sent in accordance with Section 1 of Schedule 12C – Determination of Localized Costs On and After January 1, 2004 (Schedule 12C) of Section II of the ISO New England Inc. (ISO) Transmission, Markets, and Services Tariff (the Tariff) and ISO New England Planning Procedure No. 4 – Procedure for Pool Supported PTF Cost Review.¹

On October 2, 2024, Taunton Municipal Lighting Plant submitted a Transmission Cost Allocation (TCA) application pursuant to Schedule 12C. The TCA application requested Pool Supported Pool Transmission Facility (PTF) cost allocation treatment associated with the replacement of the existing Cleary Flood Substation 115 kV ring bus with a new 115 kV breaker-and-a-half substation (the Project):²

In accordance with Schedule 12C, the NEPOOL Reliability Committee (RC) reviewed the TCA application and, on October 22, 2024, did not identify any Localized Costs to be excluded from Pool Supported PTF cost and recommended that the ISO approve the TCA application to treat \$8.278³ million as Pool Supported PTF costs.

The ISO has determined, in concurrence with the RC's recommendation, that the \$8.278 million requested in the TCA application for the Project may be included as Pool Supported PTF costs. The final PTF cost will be based on the actual expenditures associated with these facilities. The ISO's decision is based on the facts that the Project is consistent with Good Utility Practice and current engineering and design practices in the area in which the Project is being constructed.

Sincerely,

/s/ Brent Oberlin
