UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

ISO New England Inc.	**)**	**Docket No. ER27-___-000**

AFFIDAVIT OF ALEXANDER ROST ON BEHALF OF ISO NEW ENGLAND INC.

My name is Alexander Rost. I am Director of Transmission Services with ISO New England Inc. ("ISO-NE" or the "ISO"). I joined ISO-NE in March 2012 and, for the following three years, my primary responsibility was as a Senior Engineer, and then later Lead Engineer, in the Transmission Planning group. In 2015, I became the Supervisor, and then later Manager, Area Transmission Planning for northern New England, and continued in that position until 2020, when I became Manager, Resource Qualification within the Transmission Services and Resource Qualification group. In that position, I was responsible for overseeing capacity resource qualification for Forward Capacity Market activities. In 2024, I became Director of Transmission Services where I oversee the ISO's interconnection process for new Generating Facilities and Elective Transmission Upgrades (*i.e.*, the Cluster Study process) as well as the ISO's modeling and transmission service work.

Before joining ISO-NE, I worked for the New Brunswick System Operator where I supported and conducted transmission planning and interconnection studies. Within that time, I was a member of the Northeast Power Coordinating Council ("NPCC") Task Force on System Studies and the NPCC SS-38 Working Group on Inter-Area Dynamic Analysis and chaired the latter working group for approximately one year.

I have over 20 years of experience in various aspects of power transmission system analysis and capacity market resource qualification. I hold a Bachelor of Engineering Science in Electrical Engineering (Power System Option) from the University of Western Ontario, in Canada, a Master of Science in Electrical Engineering from the University of New Brunswick, in Canada, and a Master of Business Administration from Western New England University. I am also registered as a Professional Engineer in the Canadian province of New Brunswick.

With the exception of the revisions related to use of the Dispatchable Asset Related Demand model and the price-based re-dispatch mechanism for new non-firm transmission services (which are supported by the Testimony of Dennis Cakert), I support all the revisions to the ISO New England Inc. Transmission, Markets and Services Tariff submitted as part of the instant filing under ISO-NE's section 205 rights to address the Federal Energy Regulatory Commission's Order Instituting Proceeding Under Section 206 of the Federal Power Act.[1] I declare that the information included in the portions of the transmittal letter submitted in this proceeding that describe those revisions is true and correct to the best of my knowledge and belief.

/s/ Alexander Rost
