memo

To: ISO-NE Transitional Cluster Study (TCS) Interconnection Customers

From: ISO New England Inc. (ISO)

Date: November 12, 2026

Subject: Notice Regarding TCS Restudy

This memo serves as official notice that the ISO will be conducting a restudy of the TCS as a result of the withdrawal of Interconnection Requests (IR) from both the TCS and those that were earlier queued.

The withdrawal of the following Queue Positions led to the decision that a TCS restudy was needed: QP501, QP575, QP877, QP1169, QP1238, QP1427, QP1428, QP1495, QP1502, QP1513, QP1542, QP1546, QP1551, QP1553, QP1555, QP1557, and QP1567.

The ISO will conduct the TCS restudy in parallel with the formation of the Base Case Data that will be used for the first regular Cluster Study and the early parts of that study. Restudy of the TCS will be performed consistent with the methodology used for the conduct of the TCS, which is contained in Planning Procedure 5-6 Rev. 14. Following the completion of this restudy, the ISO will issue a TCS restudy report that will identify the Network Upgrades needed for TCS projects with active Interconnection Requests, and Interconnection Agreements for those projects will be amended to account for any changes in Network Upgrade responsibility and/or cost.

The ISO will contact the appropriate Interconnection Customers on an as needed basis for any information required to complete the restudy. Questions related to the interconnection process, including the TCS, can be submitted to interconnectionservices@iso-ne.com.
