From: ISO New England System Planning
Date: January 23, 2017
Subject: Interconnection Requests that are being considered in the Maine Resource Integration Study

ISO New England (ISO) is currently working through the NEPOOL Transmission Committee process to finalize the rules to support a clustering process in the New England Interconnection Procedures. The ISO is proposing that the Maine Resource Integration Study, which is currently underway, will serve as the first Cluster Enabling Transmission Upgrade Regional Planning Study, as provided for under [the proposed clustering rules](#). The ISO has received a request to share with the Planning Advisory Committee the list of Interconnection Requests that are being considered in the Maine Resource Integration Study.

The following Interconnection Requests are being considered in the Maine Resource Integration Study and have been identified as potentially eligible to participate in a subsequent Cluster System Impact Study (CSIS). This does not reflect the final list of Interconnection Requests that will be ultimately identified as eligible to participate in a subsequent CSIS. The final eligibility to participate in such a subsequent CSIS will be determined by the final clustering rules, as approved by the Commission and the status of each Interconnection Request at the time of the finalization of the Maine Resource Integration Study.
