Subject: Enhanced Storage Participation and FERC Order No. 841 Compliance: Conforming Manual Changes

The ISO is requesting a vote on revisions to the manuals that conform to the Enhanced Storage Participation and FERC Order No. 841 Compliance tariff changes. The proposed manual revisions also include changes to address a stakeholder concern with how the maximum discharge limit of an Electric Storage Facility is set when it has less than one hour of Available Energy. The changes to manuals M-11, M-20, M-35, M-REG, M-RPA, and M-36 further advance the participation of electric storage in New England. This package of manual revisions also includes clean-up changes for improved clarity and consistency. The manual changes have three associated effective dates.

Purpose for Change	Effective Date
Enhanced Storage Participation	Date of Participants Committee vote
FERC Order No. 841 Compliance	December 2019
Address Concern about Discharge Limit (Phase 1)	December 2019
Address Concern about Discharge Limit (Phase 2)	March 2020

The changes for the committee's consideration today have been presented at the following meetings:

- June 10-12, 2019, agenda item 5: <https://www.iso-ne.com/event-details?eventId=137577>
- July 8-10, 2019, agenda item 5: <https://www.iso-ne.com/event-details?eventId=137580>
