Customer, Location, 5-Minute Calculation

Customer, Location, Hourly Calculation

¹ Current value is 0.055

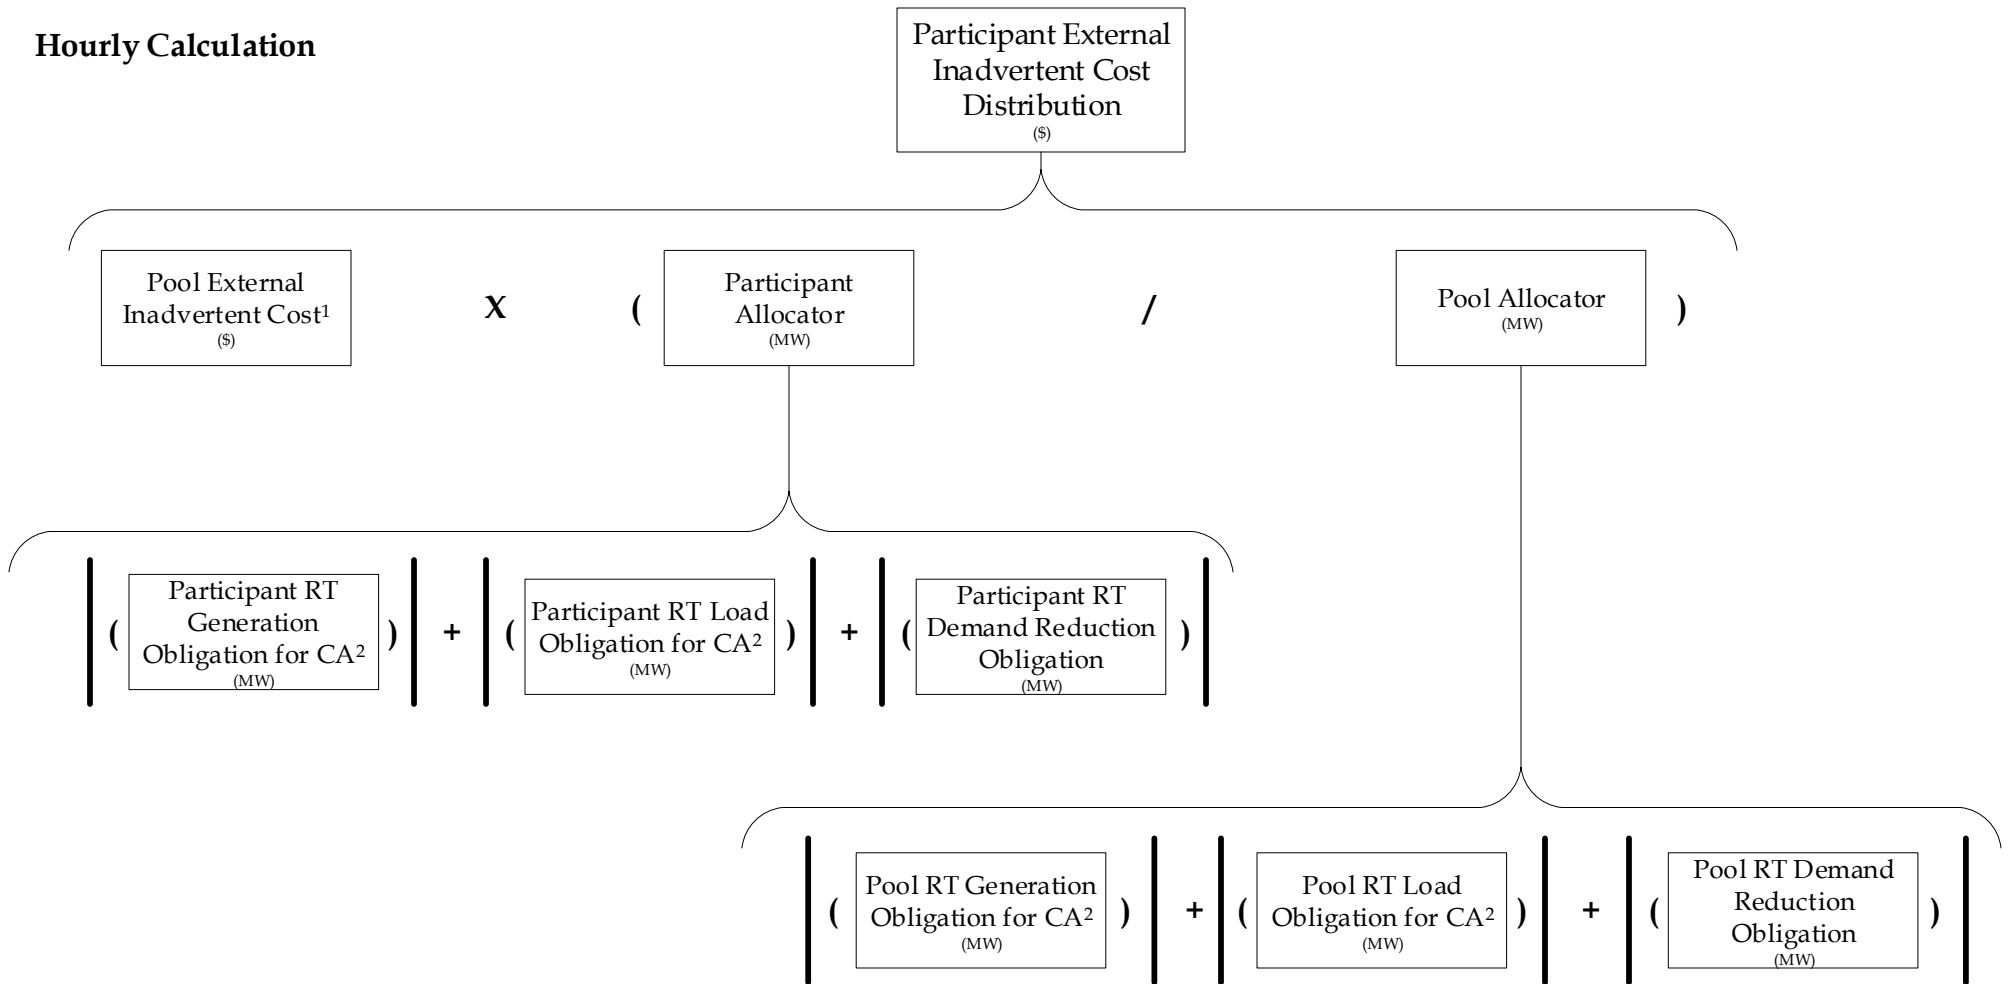

² RTLO excluding RTLO incurred at all External Nodes and RTLO incurred by DARD pumps at the specified location

5-Minute Calculation

¹ Includes Energy, Loss and Congestion components

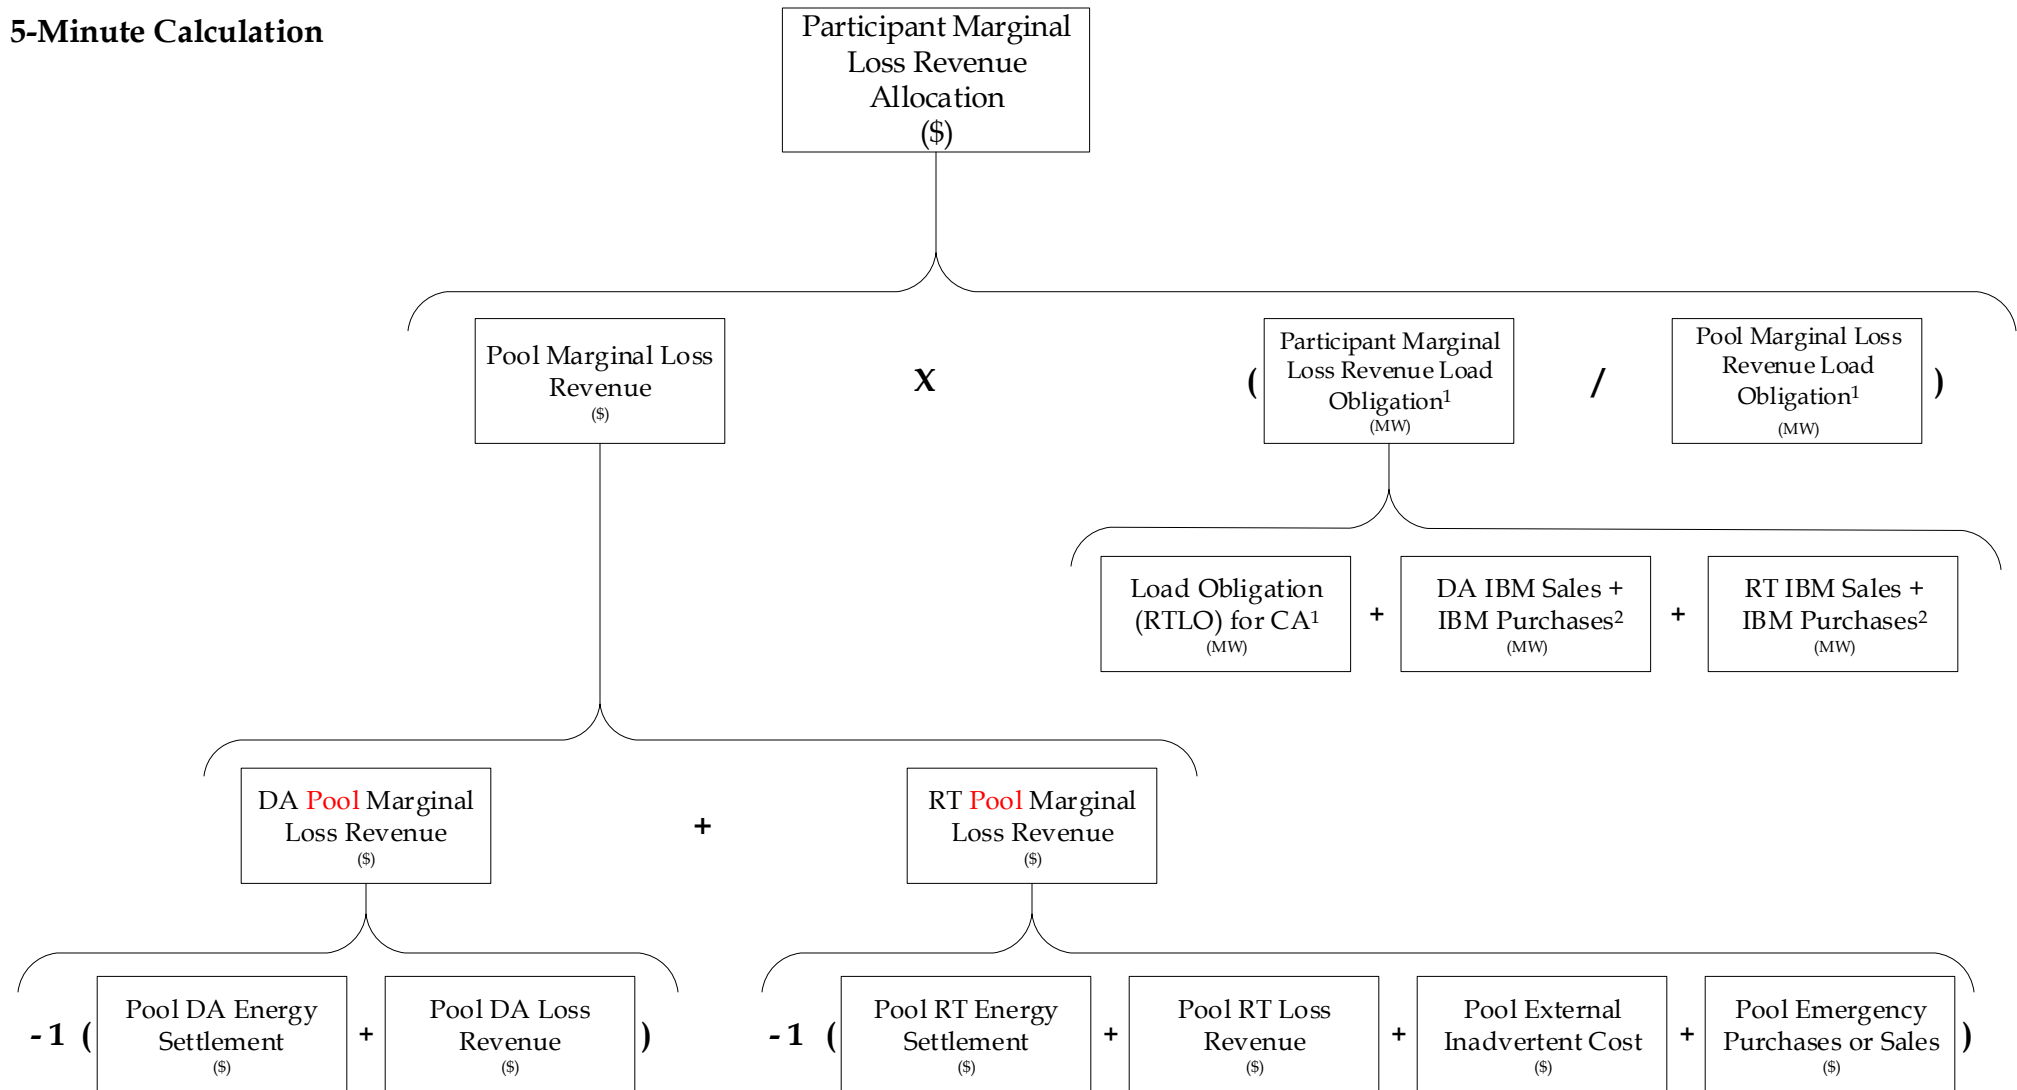

Hourly Calculation

¹ Sum of Locational External Inadvertent Cost 5-minute intervals for the hour

² Excludes Coordinated External Transactions

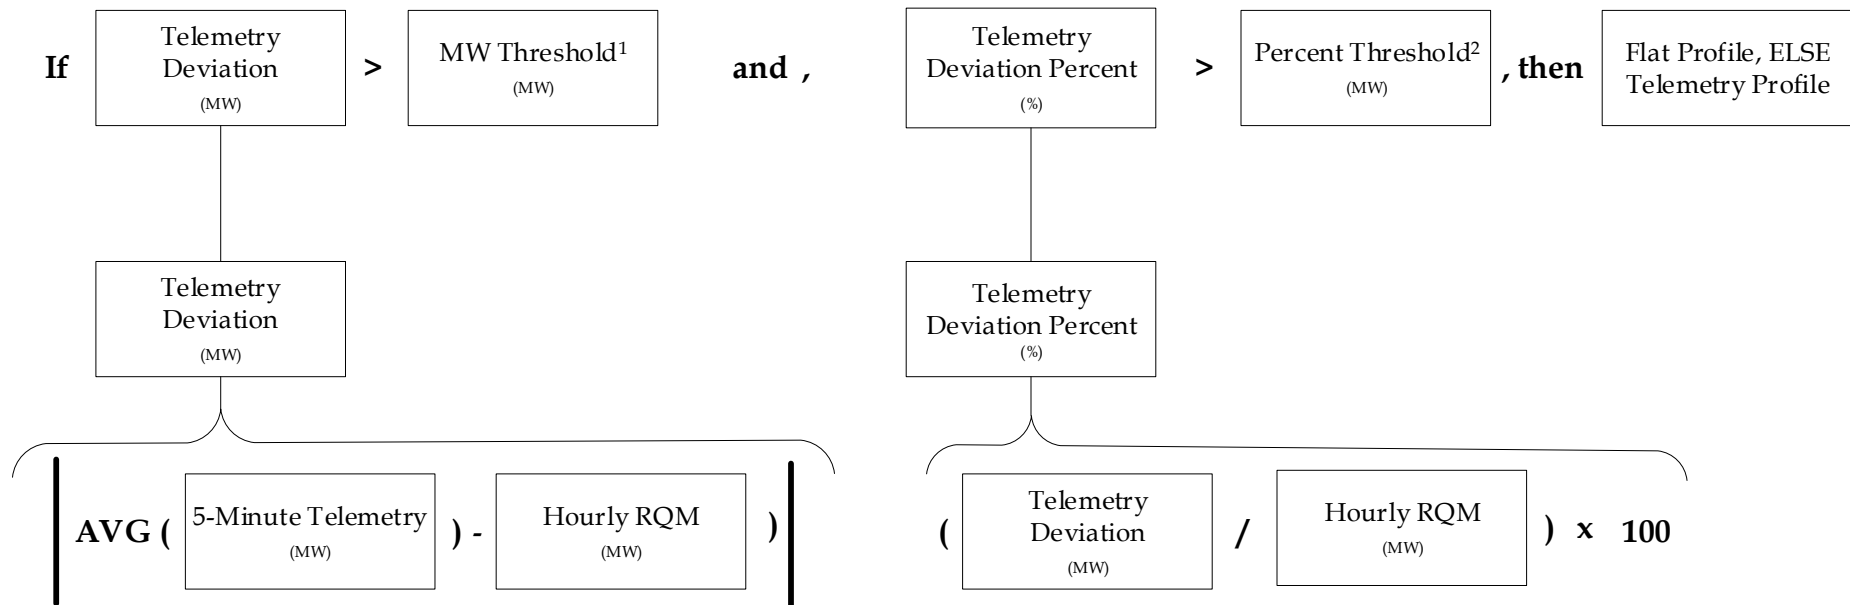

5-Minute Calculation

¹ Excludes Coordinated External Transactions

² Includes only IBM Purchases & Sales flagged to be included in the Marginal Loss Revenue Allocation in the IBT User Interface.

Determination of profile method used to determine Energy Quantity for Resources with telemetry

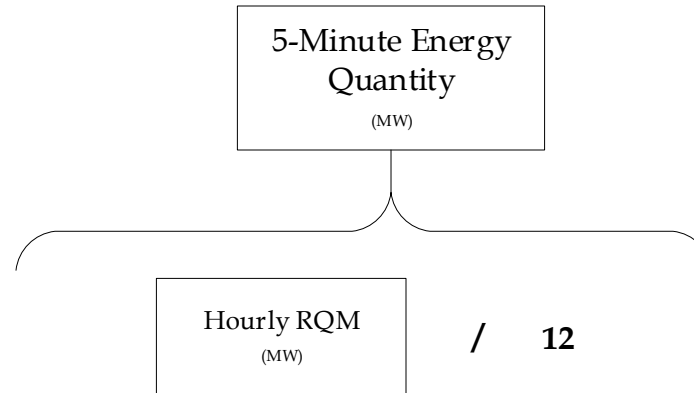

¹ Set at 10 MW

² Set at 20%

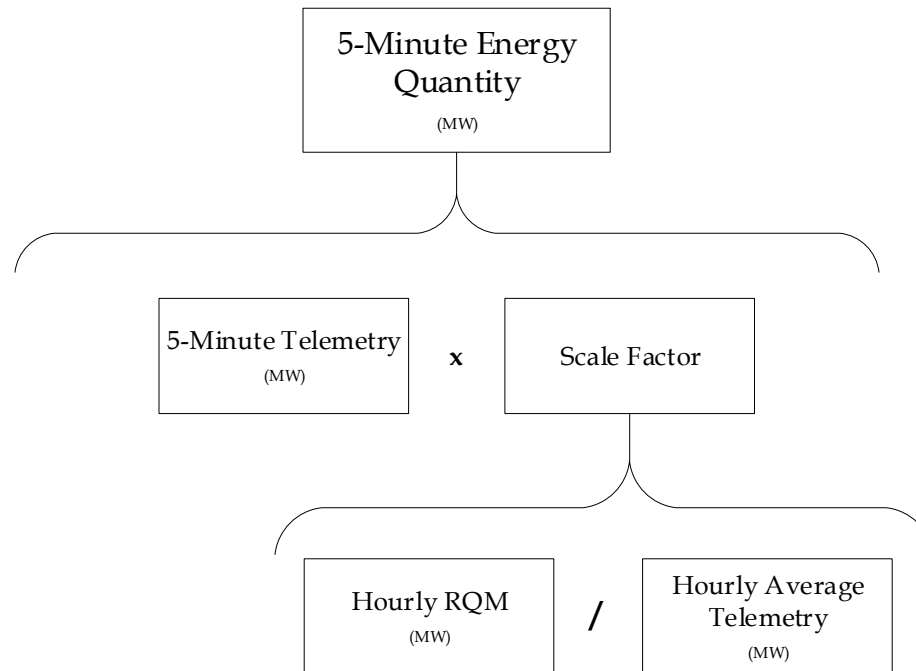

Flat Profiled Energy Quantity

- Load assets
- Settlement Only Resources
- External Transactions
- Generators and Dispatchable ARDs with telemetry not meeting telemetry variance threshold test
- If hourly average telemetry is zero, then flat profile

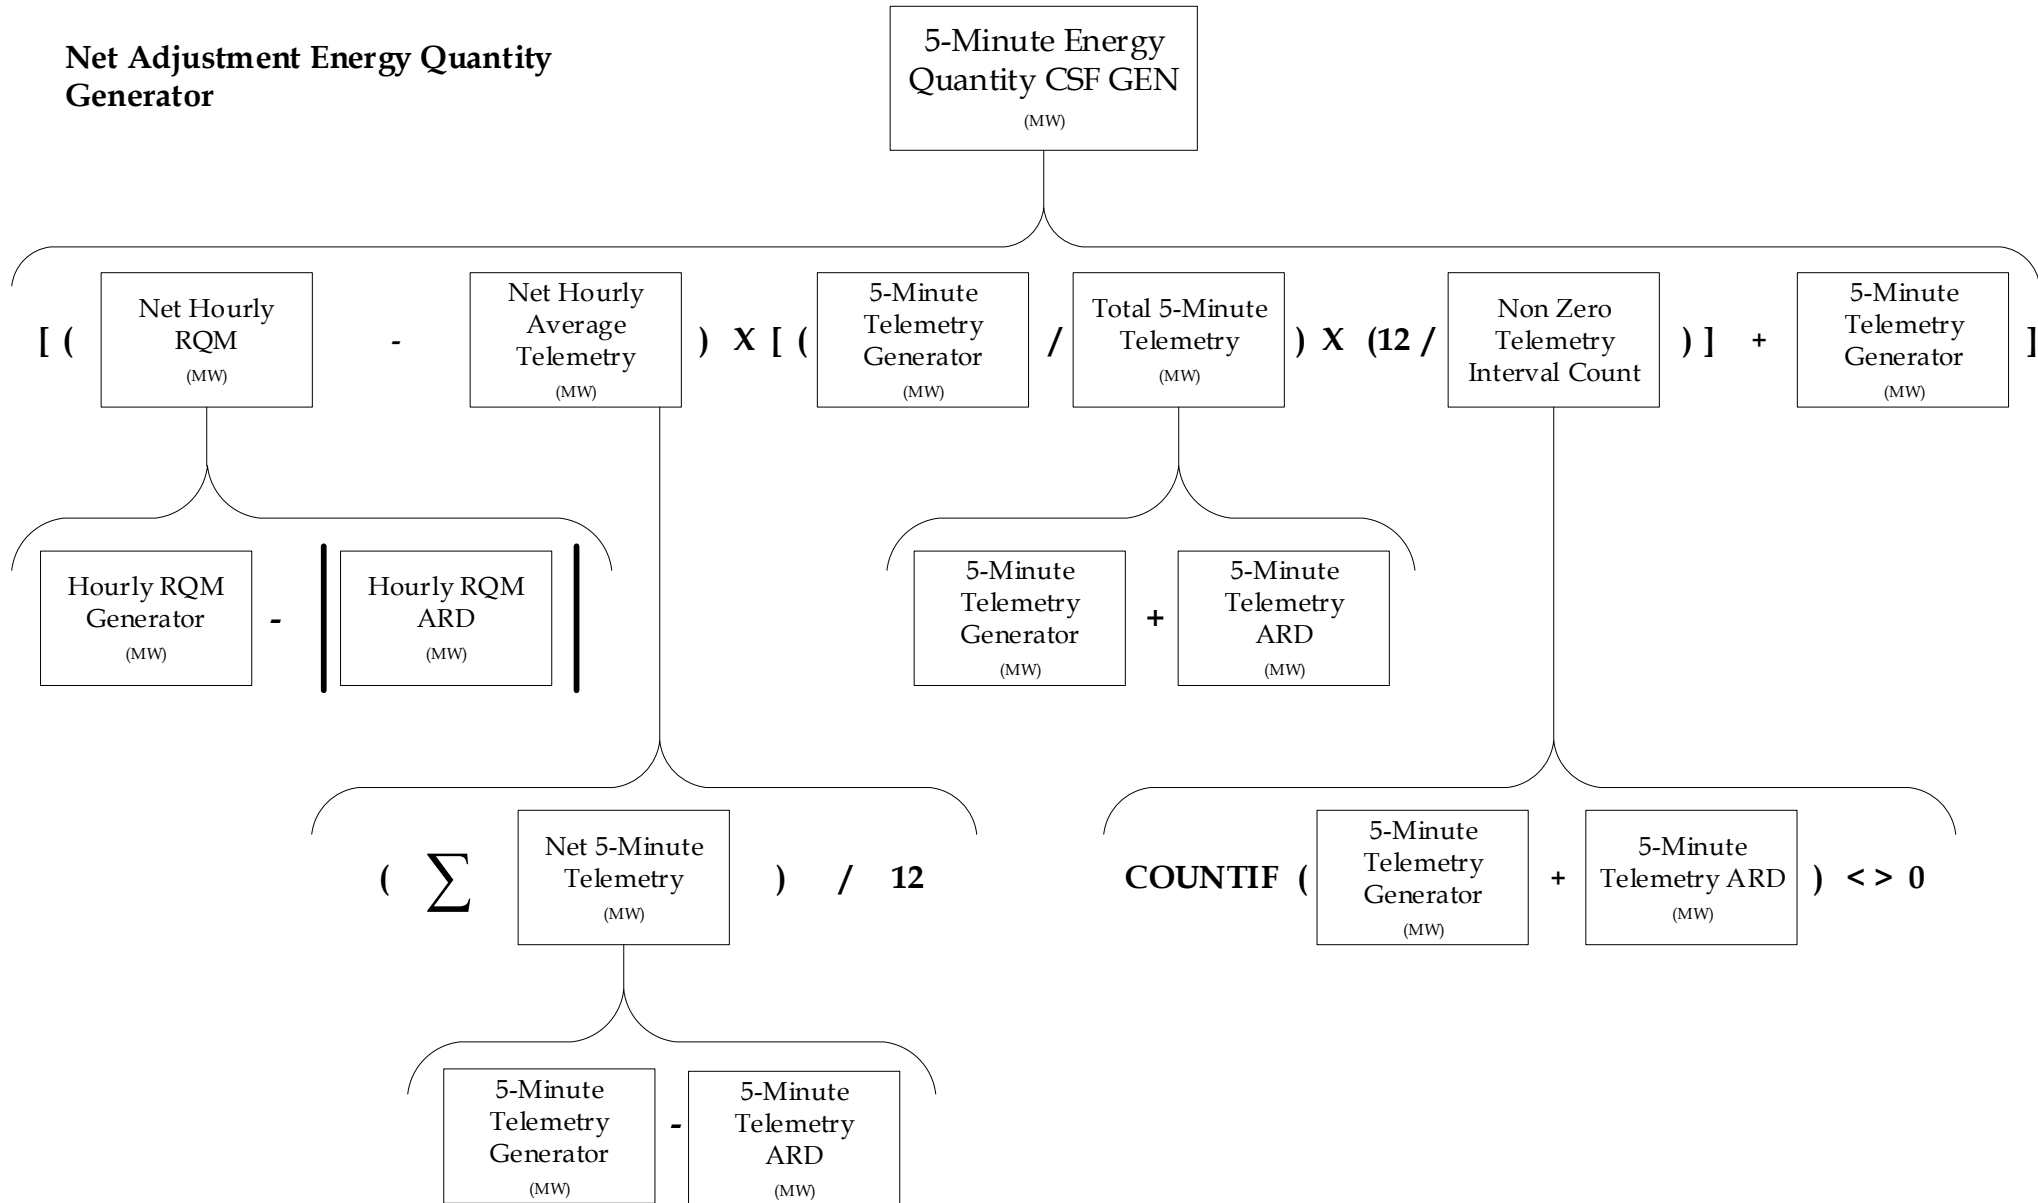

Telemetry Profiled Energy Quantity

- Generators and Dispatchable ARDs (that are not part of a CSF) with telemetry meeting telemetry variance threshold test

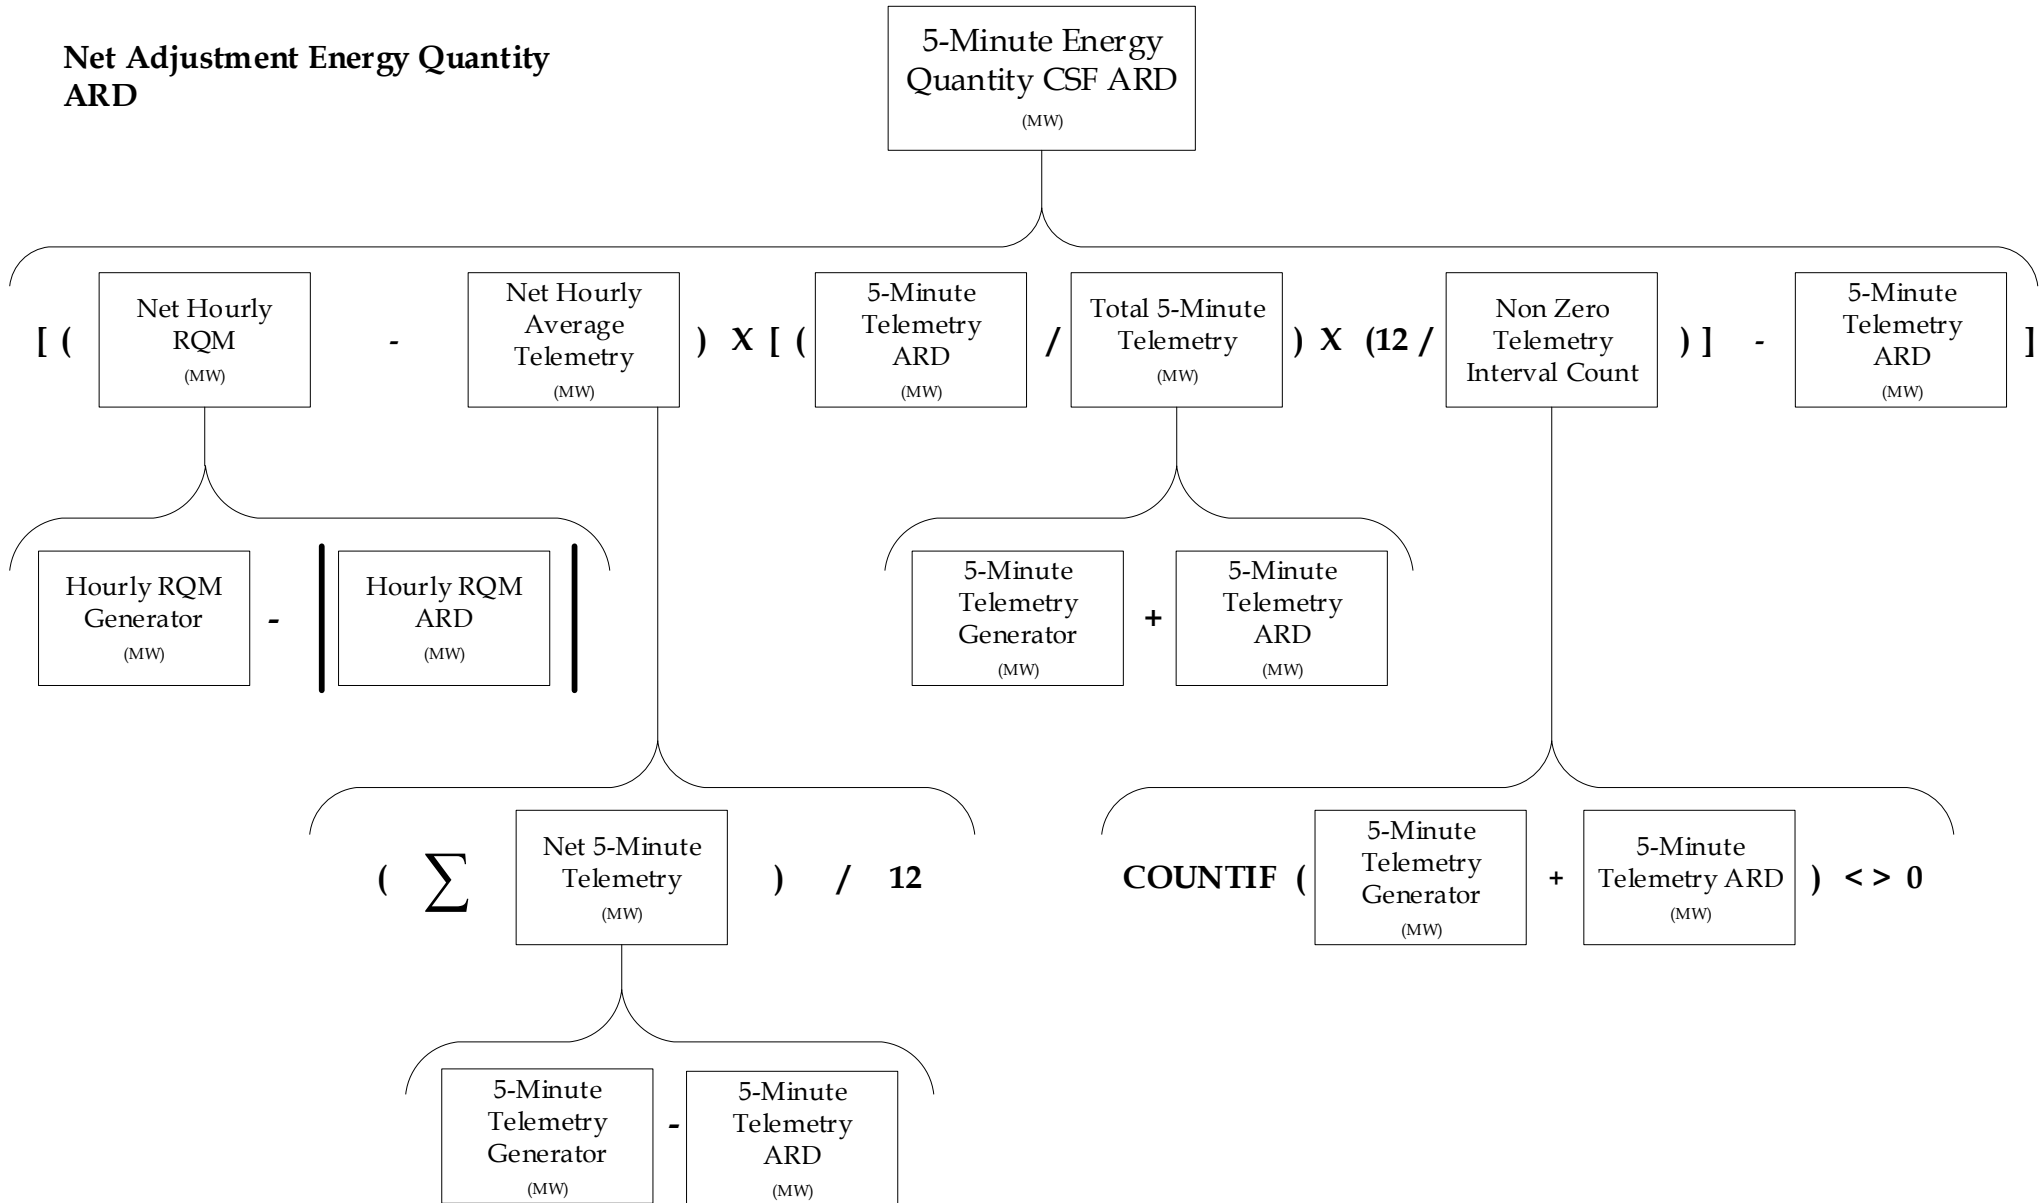

Net Adjustment Energy Quantity Generator

Note: If hourly average telemetry for both generator and ARD is zero, then flat profile.

Net Adjustment Energy Quantity ARD

Note: If hourly average telemetry for both generator and ARD is zero, then flat profile.
